

"The most accurate snapshot of EMEA CISO opinion and experiences"

Phil Cracknell, ClubCISO facilitator and former CISO Yell, TNT Express, Nomura International

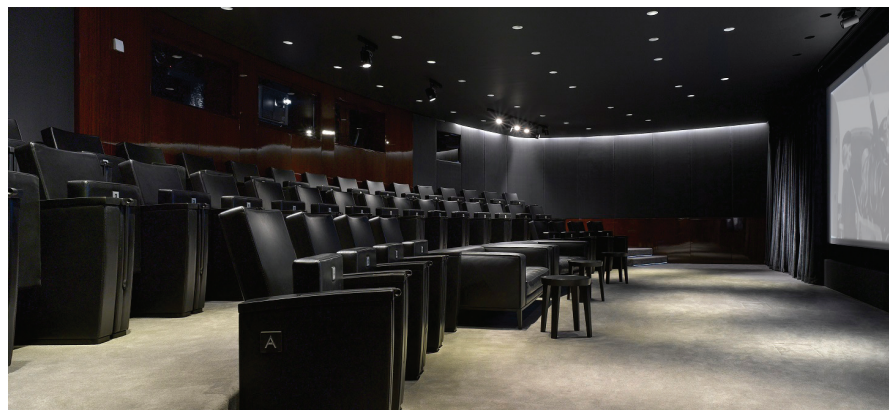

THE SECOND ANNUAL CLUBCISO SECURITY MATURITY SURVEY

Bulgari Hotel, Knightsbridge | Thursday 21 May 2015, 6.00pm

An exclusive opportunity to benchmark the maturity of your security model

As a senior EMEA information security professional, we're inviting you to take part in ClubCISO's second annual security maturity survey. This unique real-time event incorporates live polling and instant results.

Held again in the exclusive private cinema of the Bulgari Hotel in Knightsbridge, this interactive voting session will anonymously generate a wide-ranging series of benchmarks against which you can compare your organisation with its peers.

Last year's event attracted ClubCISO members from finance, government, legal, logistics, manufacturing, media, retail, telco and many more sectors.

- Over two-thirds of CISOs had suffered a data loss incident in the previous 12 months
- Nearly as many said their third-party supply chain had an immature IS posture
- Most CISOs rated their organisations' data loss prevention policy/strategy/solutions as poor
- Fewer than half thought their organisations were aligned with legal/regulatory requirements

We'll establish what's changed in the IS landscape since then. Under the Chatham House Rule we'll stimulate robust discussion around raising common standards. You'll be able to submit your own questions and take away the results on the night. There'll also be a detailed follow-up report produced to help you drive security up your organisation's agenda.

How to take part

Because of venue capacity, this event is strictly limited to the first 50 places.

Please register your interest at info@clubciso.org or call Sukhi Grewal on **0207 947 9593**.

What is ClubCISO?

ClubCISO is an elite group of EMEA CISOs. We welcome new members by invitation, strictly controlling admissions to reflect a balance of industries and appropriate seniority.

Members are individually registered and verified to maintain the integrity of the group and ensure no substitution.

By facilitating discussions on information security and cyber resilience in the organisation away from the influence of vendors or sales, members can benchmark their security investments and implementations against peers, obtain hard facts to improve buy-in at board level, and grow their personal networks.
